ABSTRACT

This is the sixth in a series of follow-up studies of the baccalaureate graduates of the University of Virginia. Data were obtained from 1963, 1964, 1965, 1966, 1968, and 1972 graduate's responses to a questionnaire seeking information from them about 6 months after graduation. The responses from baccalaureate graduates in all undergraduate schools are summarized in the first tables of this report. Separate analyses of the responses have also been made for the college of arts and sciences, and the schools of architecture, commerce, education, engineering, and applied science, and nursing. (MJM)

INTRODUCTION

This is the sixth in a series of follow-up studies of the baccalaureate graduates of the University of Virginia. The five previous studies followed the June and August graduates of 1963, 1964, 1965, 1966, and 1968 with a questionnaire seeking information about them about six months after their graduation. A similar questionnaire has now been distributed to the baccalaureate graduates of June and August of 1972. This current report adds tabulations of the responses of the 1972 graduates to those supplied by the graduates of the four earlier years. It was originally planned, after the first four annual surveys, to make this type of study each two years. This accounts for the fact that the tabulations presented here do not include any data for the graduates of June and August, 1967, 1969, 1970 and 1971.

There was a good response by the 1972 graduates to the questionnaire. Among the 1964 graduates, 94% responded, 96% in 1965, 95% in 1966, 86% in 1968 and 66% in 1972. The lower per cent in 1968 and 1972 is probably accounted for by the fact that these years after responses were received to the original request, only one additional request was made to non-respondents. In the earlier years, two additional requests were made. It was decided in 1968 that the additional time and expense of a third request were not justified.

Some information (age, degree, home state, sex) for the non-respondents was obtained from University records. For such information, therefore, the data reported here are complete for all graduates. This explains why data in all the tables for any one year do not produce the same totals.

The responses from baccalaureate graduates in all undergraduate schools are summarized in the first tables of this report. Separate analyses of the responses have also been made for the College of Arts and Sciences; and the

Schools of Architecture, Commerce, Education, Engineering and Applied Science, and Nursing. Findings are presented in the pages that follow.

Age. The modal age of all graduates at the time of response (approximately six months after graduation) was 22 years for each of the five years. The next most frequent age was 23 years. Ages ranged from 19 to 57 in 1964, from 20 to 50 in 1965, from 20 to 46 in 1966, from 19 to 47 in 1968, and from 21 to 46 in 1972.

Marital Status. Over the first three years the per cent of unmarried graduates increased from 64% to 69% and the per cent of married graduates correspondingly decreased from 35% to 30%. In 1968 and 1972 the per cent of single graduates remained relatively constant at 67% and 68% respectively.

Number of Children. In 1964 the 229 married, divorced, widowed, or separated graduates had 108 children. Correspondingly, in 1965 there were 219 graduates with 87 children; in 1966 there were 223 graduates with 92 children; in 1968 there were 287 graduates with 89 children, and in 1972 there were 295 graduates with 58 children.

Schools Awarding Degrees. The largest number of degrees and the highest per cent of the total degrees were awarded by the College of Arts and Sciences.

Next in frequency and per cent of total were Engineering in 1964, 1966, 1968 and 1972; and Commerce in 1965.

Home State at Admission to the University. All baccalaureate graduates are included in the distribution of Table 5 showing home state at time of admission to the University. Each year the largest number of graduates lived in Virginia at time of admission. For each of the five years the four home states with the next highest frequencies of graduates below Virginia were New York, New Jersey, Maryland, and Pennsylvania. When home states of graduates are grouped by region we see that outside of Virginia more graduates came from the Middle states than from any other region. The next largest number came from the Southern states with few from the rest of the country or from foreign countries.

State of Residence at Time of Response. At the time of responding to the questionnaire (approximately six months after graduation), the 495 non-military graduates of 1964 were living in 29 states and 7 foreign countries. The 557 non-military graduates of 1965 were living in 32 states, Puerto Rico, and 9 foreign countries. One was traveling at the time of response. The 548 non-military graduates of 1966 were living in 34 states and 6 foreign countries. The 591 non-military graduates of 1968 were living in 30 states and the 7 foreign countries. The 807 non-military graduates of 1972 were living in 38 states and 8 foreign countries.

When the states of residence after graduation are grouped in regions the following observations may be made. More students resided after graduation in the Middle states than in any other region for each of the five years. The Southern states (excluding Virginia) claimed the next largest number each of the five years. It is worthy of note that in 1966, 1968, and 1972 the number of graduates residing in Southern states, other than Virginia, was much greater than for any of the two previous years. In fact the increase for this region is much larger than for any of the other regions.

Among individual states more graduates lived in Virginia after graduation than in any other state. The next four states in which the largest number were living after graduation in 1964 and 1965 were New York, Maryland, Pennsylvania, and New Jersey. In 1966, the largest number of graduates were living (after Virginia) in New York, the District of Columbia, Pennsylvania, and Georgia. In 1968 the four states with the highest frequency of graduate residents (after Virginia) were New York, New Jersey, Maryland and Georgia, and in 1972 the four most popular states were Pennsylvania, the District of Columbia, Maryland, and New York.

Fields of Full-Time Advanced Study Entered by Graduates. A sharply increased number of responding graduates between 1968 and 1972 continued their studies beyond the baccalaureate degree in graduate, professional, and technical fields. Among the 640 responding graduates of 1964 there were 203 (32%) enrolled in advanced study at the time of responding. The corresponding figures for 1964 and 1965 were 288 (42%) and 282 (39%), respectively, A decrease occurred in 1968 (228 graduates representing 26% of the respondents). This ievelopment was a result in large part from the larger number of graduates entering military service. In 1972 however the number of graduates entering graduate school increased to 349 (37%).

Schools Attended for Advanced Study. In Table 8 the baccalaureate graduates of 1964, 1965, 1966, 1968, and 1972 are distributed by the schools they were attending for advanced study at the time they responded to the questionnaire. There seems to be little pattern in this distribution except that more respondents were doing advanced study at the University of Virginia than at any other university. About the only other point worth observing is the great spread of institutions attended for advanced study.

Business and Professional Employment. There appear to be few observable trends in the fields in which graduates obtain employment after graduation. The data of Table 9 do show that the largest numbers were employed in Engineering, Nursing, Teaching, and General Business-Sales for each of the five years. The fluctuations from year to year in several fields are probably not too significant and may be expected to occur in the future.

Sex. The number of graduates who were females increased each year from 100 in 1964 to 240 in 1972. The per cent of graduates who were females was highest in 1972, reflecting the limited enrollment of females in the college. The lowest was in 1965 when only 11% of the graduates were females.

PART 2: COLLEGE OF ARTS AND SCIENCES

In Part 1 of this report the responses to a questionnaire survey of all University of Virginia baccalaureate graduates for the years 1964, 1965, 1966, 1968 and 1972 were analyzed. In this Part 2 the responses are similarly analyzed for the sub-group of graduates who received their degrees in the College of Arts and Sciences. In 1964, 94% of the graduates responded to the questionnaire; 96% in 1965 and 1966; 82% in 1968; and 61% in 1972.

Age. For all four years the modal age of graduates in the College was 22 years with 23 the next most frequent age. The range in age for graduates of 1964 was 21 to 40; for 1965 the range was 20 to 28; for 1966 it was 20 to 37; for 1968 it was 19 to 47; and for 1972 it was 21 to 42.

Marital Status. Over the three year period 1964-1966 the per cent of unmarried graduates increased from 71% to 77%, and the per cent of married graduates correspondingly decreased from 28% to 22%. In 1968 the per cent of unmarried graduates decreased to 73 with a corresponding per cent of increase of married graduates to 26. While in 1972, the per cent of single graduates again increased to 77%.

Number of Children. In 1964 the 103 married, divorced, widowed, or separated graduates had 47 children. Correspondingly, in 1965 there were 93 graduates with 32 children; in 1966 there were 96 graduates with 25 children; in 1968 there were 135 graduates with 33 children; and in 1972 there were 120 graduates with 19 children.

Academic Majors. By consulting the records of the University it was possible to ascertain the academic majors of all the graduates in the College of Arts and Sciences. Table 15 contains the distribution.

There were 162% more graduates in the College of Arts and Sciences in 1972 than

in 1964. Aside from Astronomy, Classics, and Latin American Studies, each with only zero, one, two, or three majors in any year, there were six majors that increased as rapidly or more rapidly than the increase in all Arts and Sciences graduates. These majors were: economics (149%), government and foreign affairs (123%), psychology (128%), English (136%), biology (192%), and history (131%).

Home State at Admission to the University. By consulting the records of the University it was possible to ascertain the home state at time of admission of all the graduates in the College of Arts and sciences for all five years. As may be seen in Table 16, Virginia was the home state at time of admission of the greatest number of graduates for each of the years 1964, 1965, 1966, 1968, and 1972. New York, New Jersey, Maryland, and Pennsylvania were the home states for the next largest numbers of graduates during the years 1964-66 and 1972. In 1968, however, more graduates were from Tennessee than from Maryland.

State of Residence at Time of Response. Many of the respondents among the graduates for all five years were in the military service at time of responding. The non-service graduates for each of the five years are distributed in Table 17 by state of residence at time of response. Virginia continued to be the state of residence of the greatest number of graduates. If the total number of graduates for the five years for each state is considered, it develops that New York, Maryland, and the District of Columbia have the highest totals after Virginia. Sharp increases between 1964 and 1972 for the District of Columbia (5-28) and Pennsylvania (3-22) are worth noting.

Fields of Full-Time Advanced Study Entered by Graduates. A larger number of responding Arts and Sciences graduates continued their studies beyond the baccalaureate degree in 1965 and 1972 than in any of the other years. There was a slight decrease in 1966, however, complemented by the number of graduates in military service. The largest increase between 1964 and 1972 came in Graduate Arts and Sciences (57 to 84), Education (1 to 17), and Law (58 to 73). It is significant, however, that the number pursuing full-time advanced study in Arts and Sciences fell sharply between 1966 and 1968 (67 to 46).

Business and Professional Employment. There appear to be few observable trends in the fields in which graduates of the College of Arts and Sciences obtain employment after graduation. The data of Table 19 do show general business and sales, banking and finance, and teaching as the fields with the largest number of employed graduates over the five years. In 1964 rine were unemployed and one was traveling. In 1965 one was unemployed and one was traveling. In 1966 two were unemployed; in 1968 eight were unemployed and one deceased; and in 1972, 27 were unemployed.

TOTALS		86	109	201	43

Sex. In 1964 and 1965 all graduates of the College were men. In 1966 there was one female among the graduates who received a Bachelor of Arts with Distinction in sociology. In 1968 there was one female who received a Bachelor of Arts in government and foreign affairs. In 1972 there were 52 female graduates, reflecting the limited admission of women.

PART 3: SCHOOL OF ARCHITECTURE

In Part 1 of this report the responses to a questionnaire survey of all University of Virginia baccalaureate graduates for the years 1964, 1965, 1966, 1968, and 1972 were analyzed. In this Part 3 the responses are similarly analyzed for the sub-group of graduates who received their degrees in the School of Architecture. Ninety-five per cent of these Architecture graduates of 1964 responded to the questionnaire, 93% in 1965, 86% in 1966, 92% in 1968, and 71% in 1972.

Age. In 1964, 1965, 1966, 1968, and 1972 the modal age was 23.

Home State at Admission to the University. By consulting the records of the University it was possible to ascertain the home state at time of admission of all the graduates in the School of Architecture for all five years. Virginia was the home state of the largest number of graduates with Pennsylvania, New York, and New Jersey the states with the next highest frequency.

State of Residence at Time of Response. In 1964 there was 1 (5%) School of Architecture graduate who entered the military service upon graduation, 5 (36%) in 1965, 5 (26%) in 1966, 11 (34%) in 1968, and 3 (8%) in 1972. The non-military graduates are distributed in Table 26 by state of residence at time of responding. Over the five years Virginia was the state of residence of the greatest number of respondents at the time of responding. The remaining graduates were residing in 19 other states and foreign countries.

Sex. All of the graduates in the School of Architecture for all five years were men.

PART 4: McINTIRE SCHOOL OF COMMERCE

In Part 1 of this report the responses to a questionnaire survey of all University of Virginia Baccalaureate graduates for the years 1964, 1965, 1966,1968, and 1972 were analyzed. In this Part 4 the responses are similarly analyzed for the sub-group of graduates who received their degrees in the McIntire School of Commerce. Ninety-three per cent of these Commerce graduates of 1964 responded to the questionnaire; 95% in 1965; 96% in 1966; 92% in 1968, and 72% in 1972.

Age. In 1964 the modal age of the McIntire School of Commerce graduates at the time of responding was 22, as it was in 1965, 1966, 1968, and 1972.

Sex. The class of 1964 included one female while the classes of 1965 and 1966 consisted entirely of males. The class of 1968 included one female, and the class of 1972 included two females.

PART 5: SCHOOL OF EDUCATION

In Part 1 of this report the responses to a questionnaire survey of 311

University of Virginia baccalaureate graduates for the years 1964, 1965, 1966, 1968,
and 1972 were analyzed. In this Part 5 the responses are similarly analyzed for
the sub-group of graduates who received their degrees in the School of Education.

Ninety-two per cent of these Education graduates of 1964 responded to the questionnaire,
98% in 1965, 91% in 1966, 92% in 1968, and 70% in 1972.

Age. In 1964 the modal age of the School of Education graduates at the time of responding was 22, as it was in 1965, 1968, and 1972. The age occurring with the next highest frequency among the graduates in each of the four years was 23. In 1966, however, the modal age was 23 with 22 occurring with the next highest frequency.

Home State at Admission to the University. By consulting the records of the University it was possible to ascertain the home state at time of admission of all the graduates in the School of Education for the past five years. Virginia was the home state of the largest number of graduates, followed by Pennsylvania, New Jersey and New York.

State of Residence at Time of Response. In 1964, 6 (13%) respondents were in the military service, with 4 (7%) in 1965, 1 (2%) in 1966, none in 1968, and one (2%) in 1972. The non-military graduates are distributed in Table 39 by state of residence at time of responding. Over the five years Virginia was the residence of the greatest number of respondents. The remaining graduates were residing in a total of 24 other states and foreign countries.

PART 6: SCHOOL OF ENGINEERING AND APPLIED SCIENCE

In Part 1 of this report the responses to a questionnaire survey of all University of Virginia baccalaureate graduates for the years 1964, 1965, 1966, 1968, and 1972 were analyzed. In this Part 6 the responses are similarly analyzed for the sub-group of graduates who received their degrees in the School of Engineering and Applied Science. Of the 1964 Engineering graduates 97% replied to the questionnaire; 99% in 1965; 94% in 1966; 90% in 1968; and 75% in 1972.

Age. The modal age for the School of Engineering and Applied Science graduates of all five classes was 23. The age that occurred with the next highest frequency among all the graduating classes was 22.

State of Residence at Time of Response. In 1964, 24 (27%) respondents were in the military service. It dropped to 14 (19%) for the graduates of 1965. In 1966, there were 15 (17%) graduates in the military service, in 1968 there were 37 (27%), and in 1972 there were 25 (18%). The non-military graduates are distributed in Table 47 by state of residence at time of response. Over the five years Virginia was the post-graduate residence of the greatest number of respondents. The remaining graduates were residing in a total of 34 other states, mostly in the eastern section of the United States, and in one foreign country.

Sex. All the graduates of the School of Engineering and Applied Science for the years 1964, 1965, 1966, 1968, and 1972 were men.

PART 7: SCHOOL OF NURSING

In Part 1 of this report the responses to a questionnaire survey of all University of Virginia baccalaureate graduates for the years 1964, 1965, 1966,1968, and 1972 were analyzed. In this Part 7 the responses are similarly analyzed for the sub-group of graduates who received their degrees in the School of Nursing. In 1964 replies were received from 99% of the graduates; all 54 graduates responded in 1965; in 1966 97% replied; in 1968 86% replied; and in 1972 75% replied.

Age. The modal age for the graduats of all five classes of the School of Nursing was 22. The age that occurred with the next highest frequency among the graduates of 1965, 1966, 1968, and 1972 was 23. In the class of 1964, 23 and 21 occurred with equal frequency.
